

# prado introduces light + ventilation mini

18/02/2026 – Veurne Belgium

The innovative Belgian manufacturer of invisible home technology, prado, introduces the an all-new light + ventilation mini, the next evolution of a product that redefined how ventilation is integrated into high-end residential architecture. Smaller, quieter and more precise, this entirely new system further refines prado's vision of creating cleaner ceilings through invisible technology.

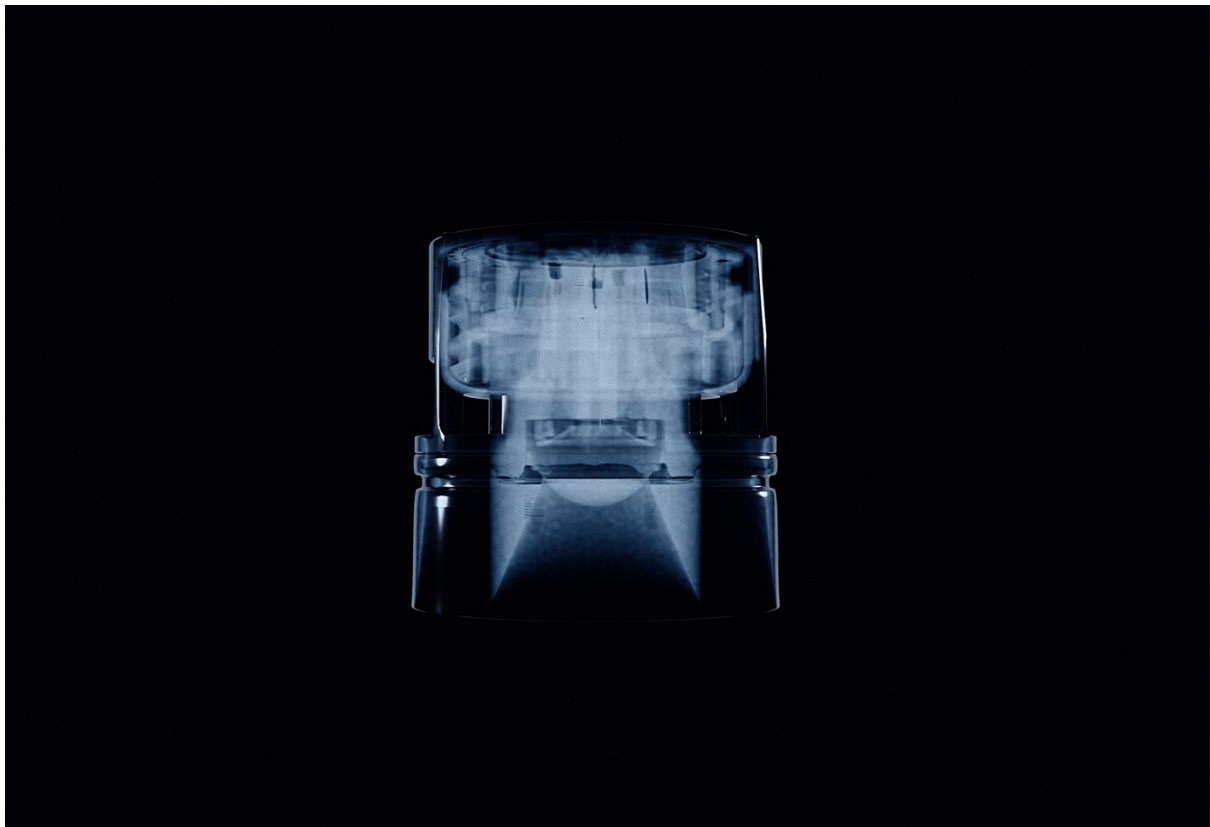

Since its unveiling, light + ventilation has reshaped ceiling design. For the first time, ventilation became invisible – transforming a technical necessity into a seamless architectural element. Five years after its launch, prado chose to challenge itself by revisiting the product that defines the brand and changed ceilings forever.

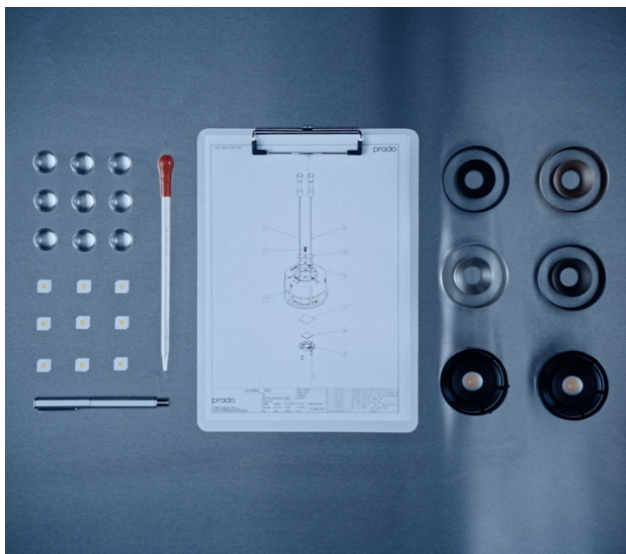

The result is a completely re-engineered system. Light + ventilation mini features a visible diameter of just 68 mm, 60% smaller than its predecessor, made possible by an entirely redesigned ventilation mechanism. With refined proportions, it delivers up to 700 lumens of light while extracting up to 30 m<sup>3</sup>/h of air, making it ideal for smaller spaces where proportion matters.

An adjustable plaster ring accommodates different ceiling finishes, while compatibility with Ø100 and Ø125 ventilation ducts ensures installation remains simple, precise and seamless.

By integrating lighting and ventilation into one refined luminaire, prado once again transforms technical performance into architectural clarity. Light + ventilation mini restores visual calm, supports architectural intent and proves that true innovation lies in doing more with less. It is the embodiment of prado's ongoing obsession with reducing visual noise and elevating ceiling design.

By combining lighting and ventilation into a single, refined luminaire, prado transformed a technical necessity into an architectural tool.

Light + ventilation mini builds on that legacy. It is prado's most valuable product to date—the innovation that helped define the brand's position in the market by offering a solution that goes beyond performance alone. It not only simplifies installation but actively contributes to the reduction and clarification of space, most notably at ceiling level.

## About prado

prado, founded by Thibault Renson in 2020, enables invisible technological functions to be seamlessly integrated into ceilings. prado luminaires combine technical innovation with pure, minimalist aesthetics and are manufactured to the highest luxury standards. Each piece is designed to disappear into the architecture while elevating the quality and atmosphere of the world's most refined interiors. prado operates across Europe, the Middle East and the United States, delivering discretion and premium solutions to prestigious residential projects worldwide.
